TULSA-BASED DTS COMMUNICATIONS MERGES WITH SIGMA SOLUTIONS

TULSA, OKLAHOMA, June 3, 2010 – Tulsa-based DTS Communications, Inc., a four-year-old company specializing in secure high-end wireless networks Sigma Solutions, Inc., a San Antonio-based information technology company, The announcement was made jointly today by James Cavin, president, and Scott Gruendler, Sigma Solutions president.

“For some time, we have been seeing great demand for wireless local area networks and Mesh services, which is a very specialized niche market that builds secure wireless networks for universities, municipalities and hospitals in implementations that range in area from three to 10 square miles,” Gruendler said. “The wealth of expertise DTS brings to the table in wireless technology in both indoor and outdoor settings will add greatly to the range of services we can offer existing and new clients in our various markets.”

For DTS, the merger with a company the size of Sigma Solutions will enable it to expand its portfolio of platforms, as well as its solutions capabilities and move more broadly into the Texas market. The company sees immediate growth potential in many markets – healthcare with clinics, hospitals and telemedicine; education , including distance learning, and municipalities with their increasing need for emergency management, surveillance and police work – where greater ease of communication with a wireless infrastructure yields substantial benefits at significantly reduced cost.

“Wireless – particularly secure wireless – is a high-growth area of technology right now,” said Cavin. “We are excited to be able now to make the most of the opportunities that come to us and to work hand-in-hand on the implementations with an organization that puts quality at the top of its list.”

About Sigma Solutions, Inc.

Sigma Solutions is a \$100 million company founded in 1998 in San Antonio and provides implementation and maintenance of enterprise-grade data systems to a number of corporate and organizational clients.
